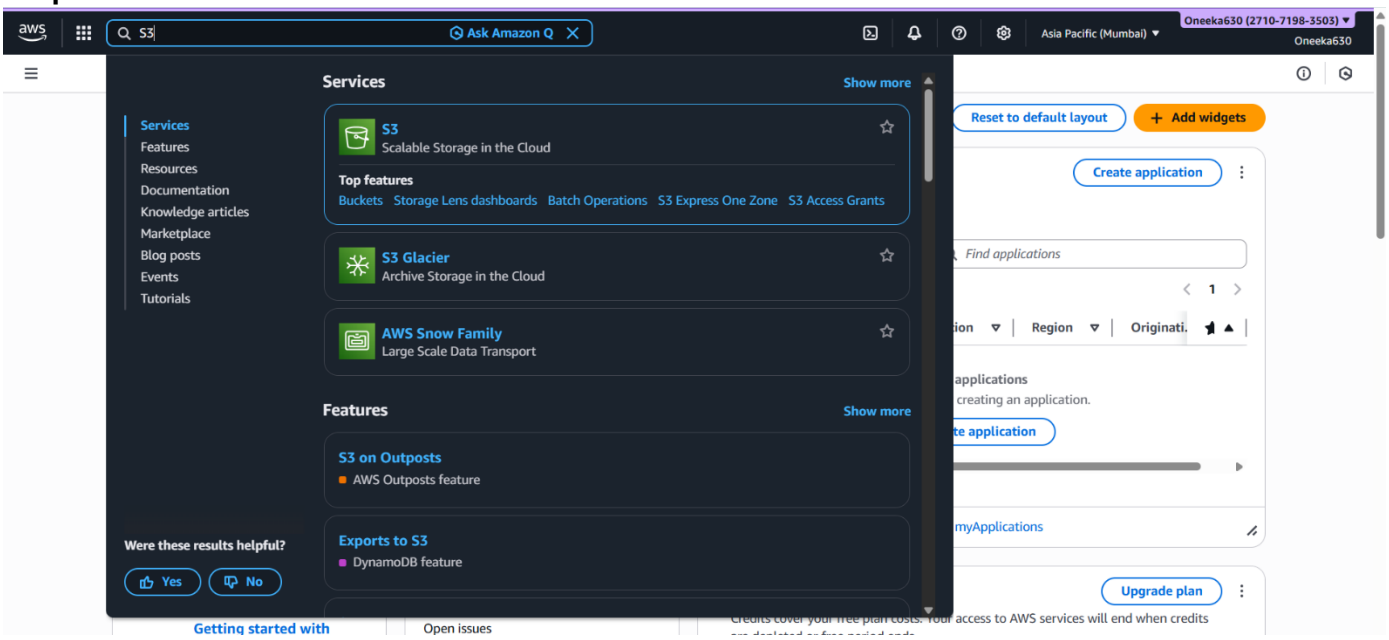
Name: Oneeka Kundu Roll.No.:129 ExamRoll:11600223145 Date:22/1/26

Assignment No.: 5

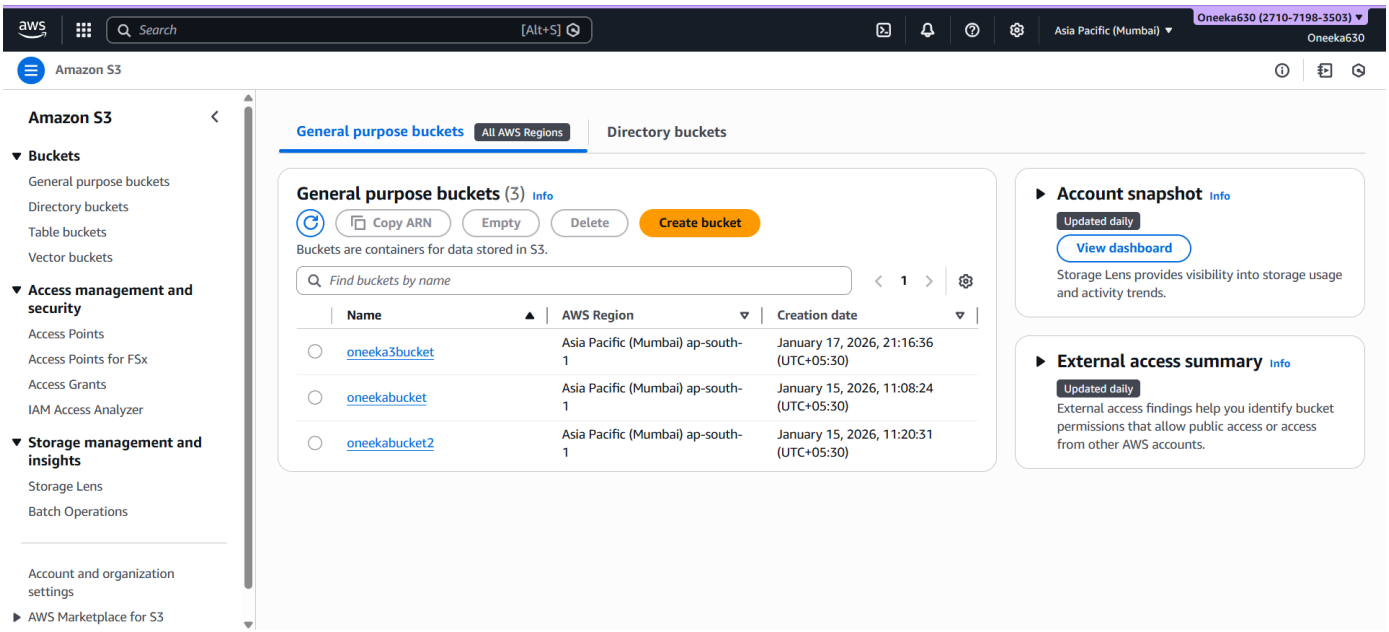
Problem Statement: Create a private bucket in AWS. Upload a file and check by presigned URL whether you can access the file or not.

Solution:

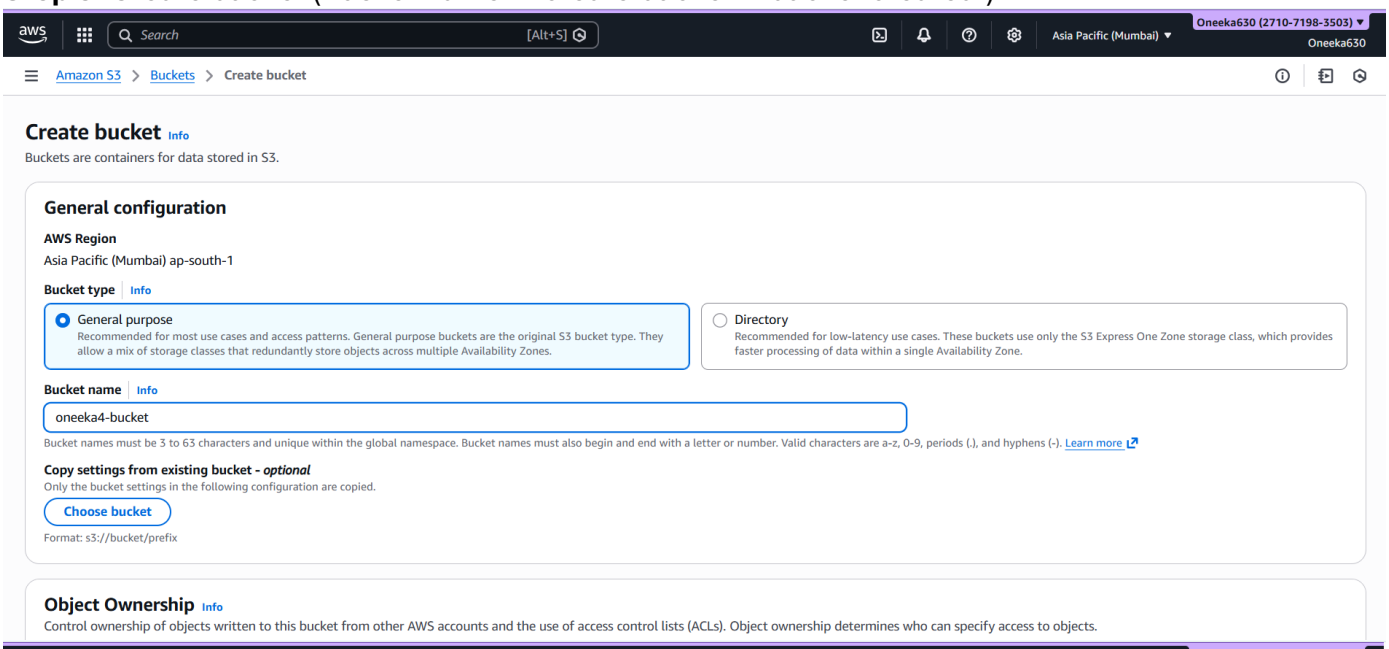
Step 1: Search **S3**

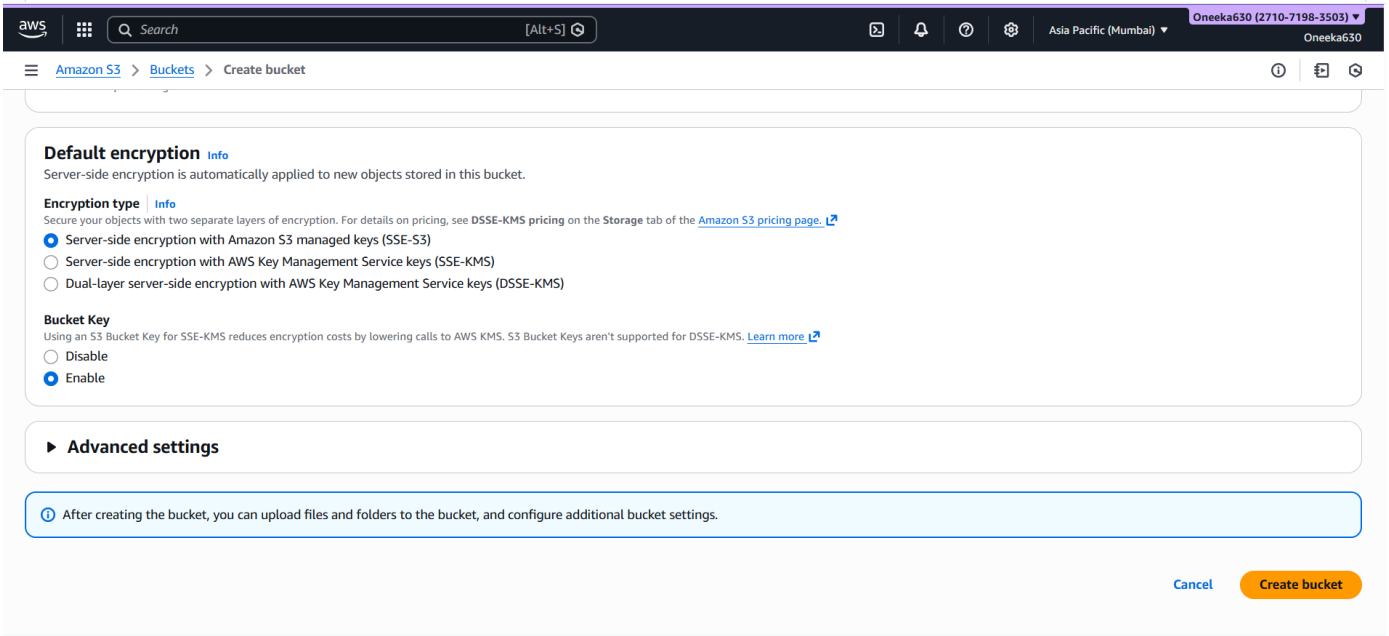


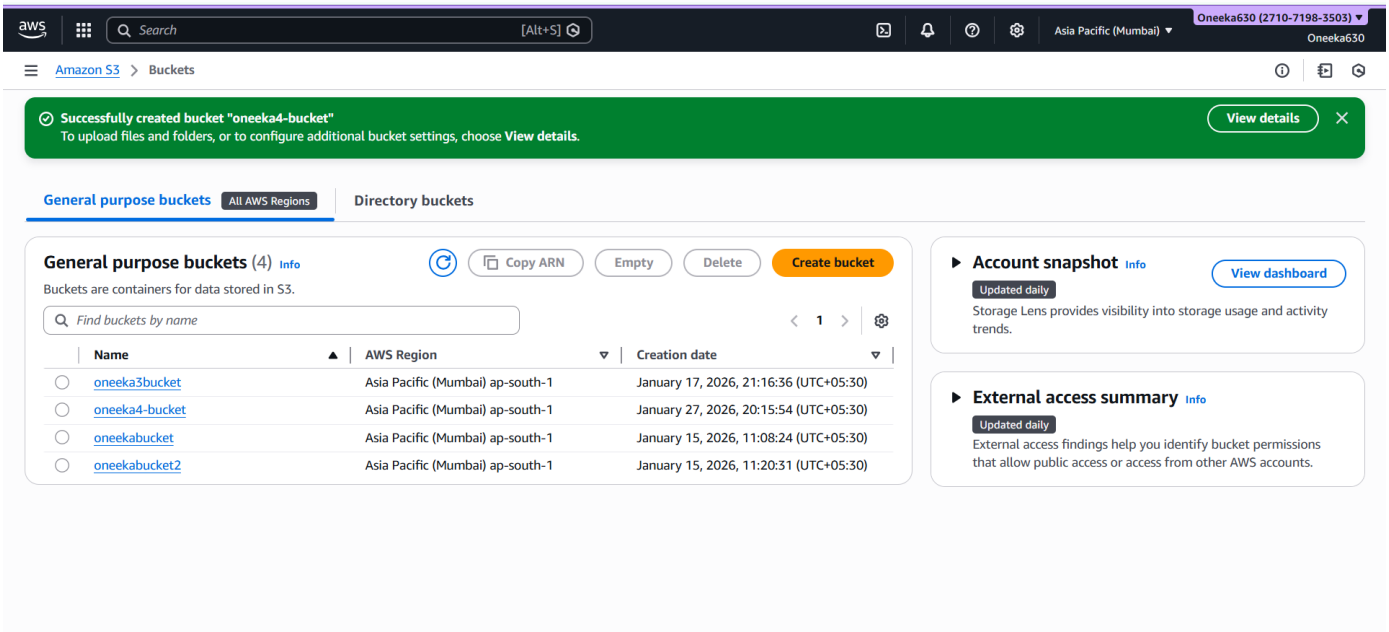
Step 2: Open **S3 ->** Click **Create bucket**



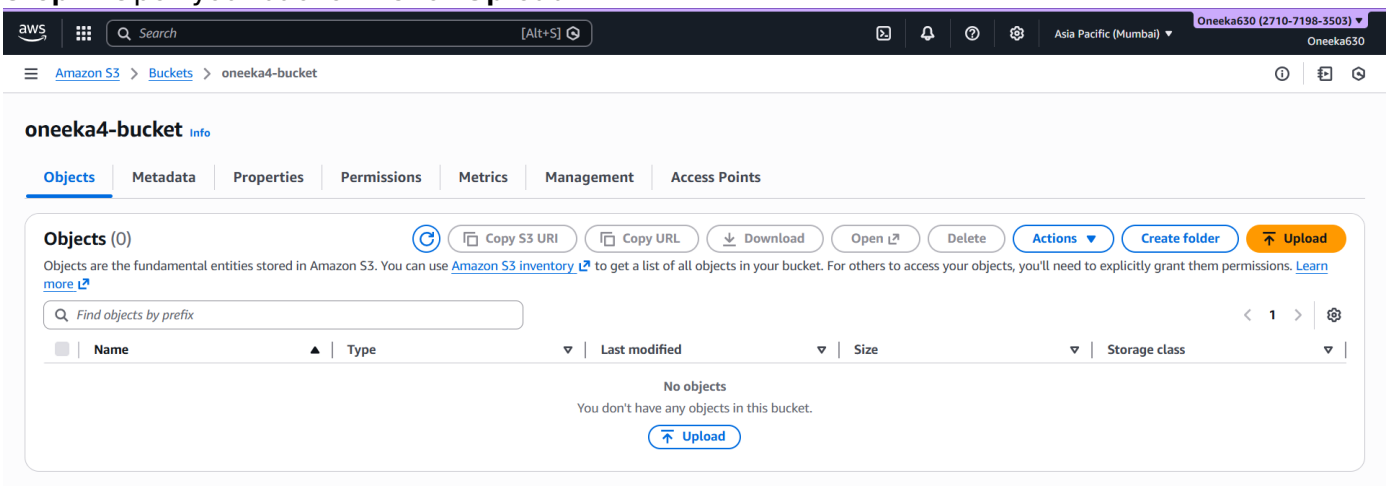
Step 3: Create bucket (Busket name -> create bucket ->bucket created!)



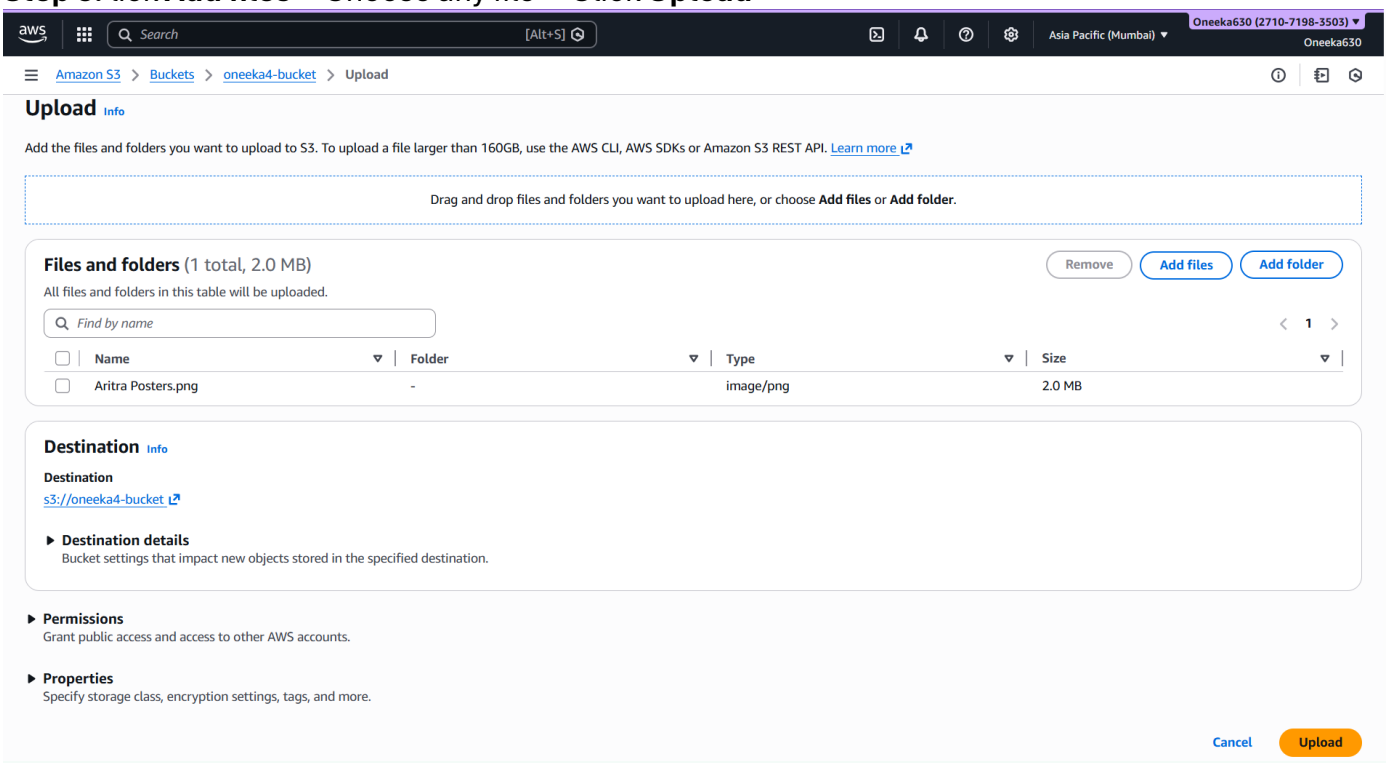


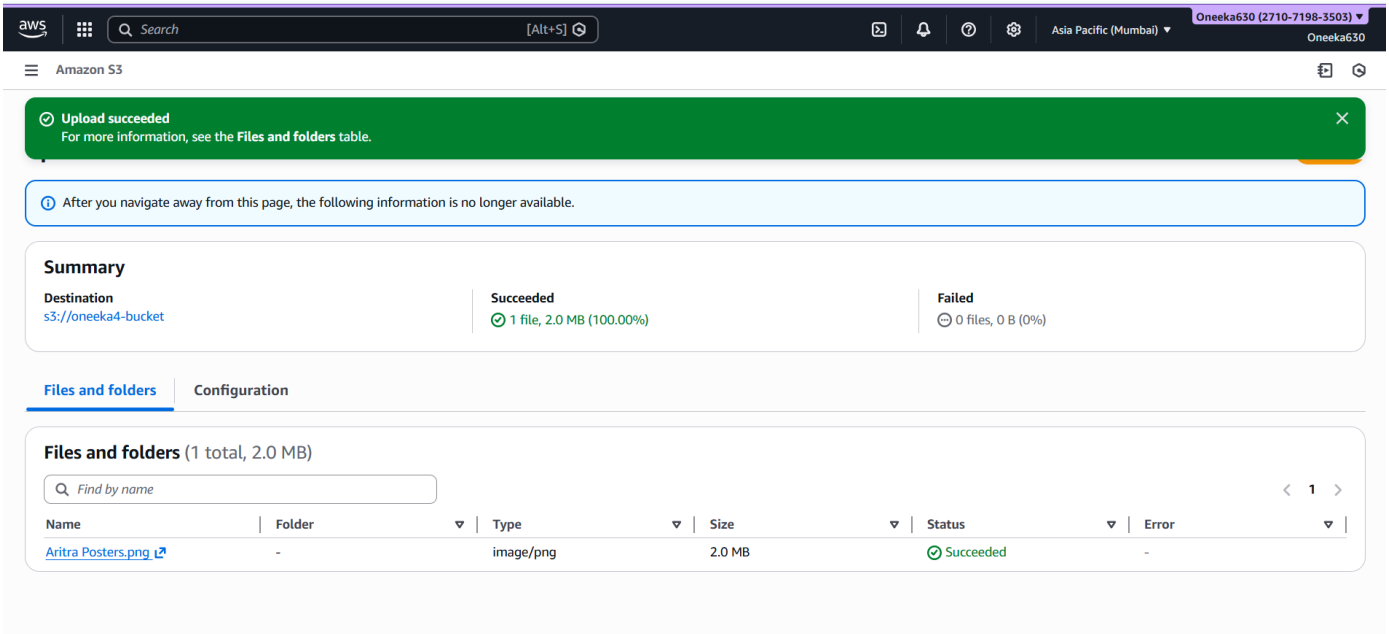


Step 4: Open your bucket → Click **Upload**

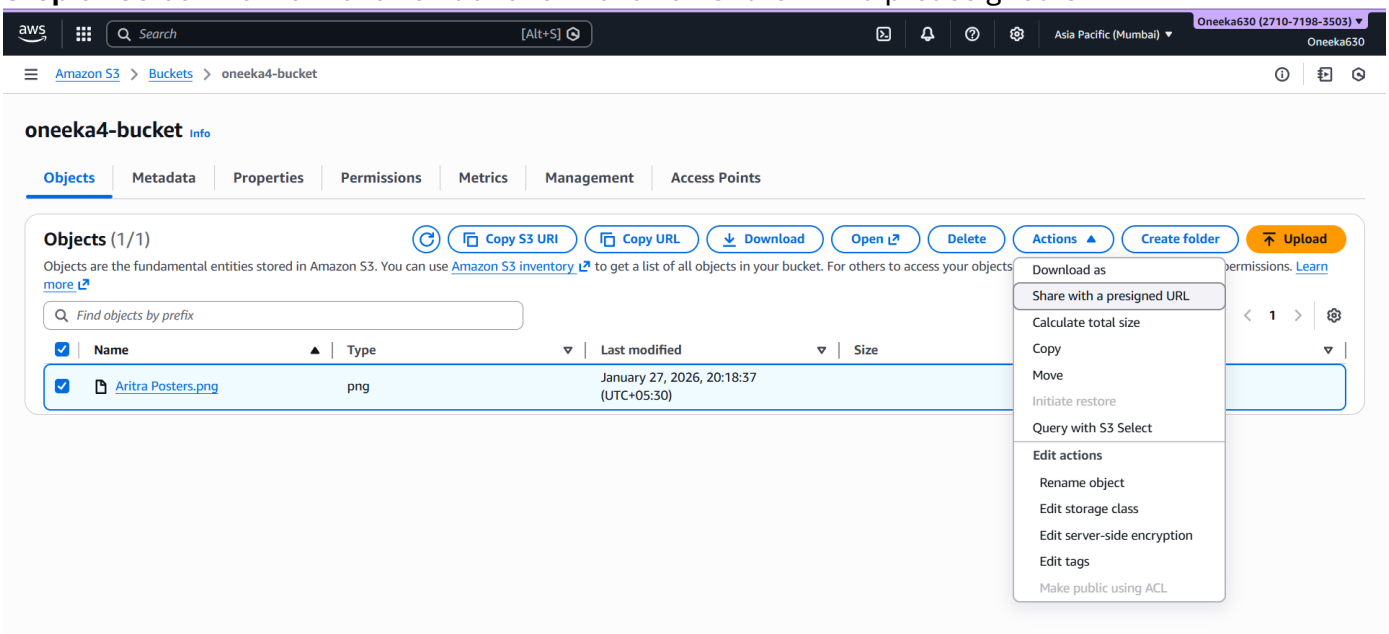


Step 5: lick **Add files** → Choose any file-> Click **Upload**

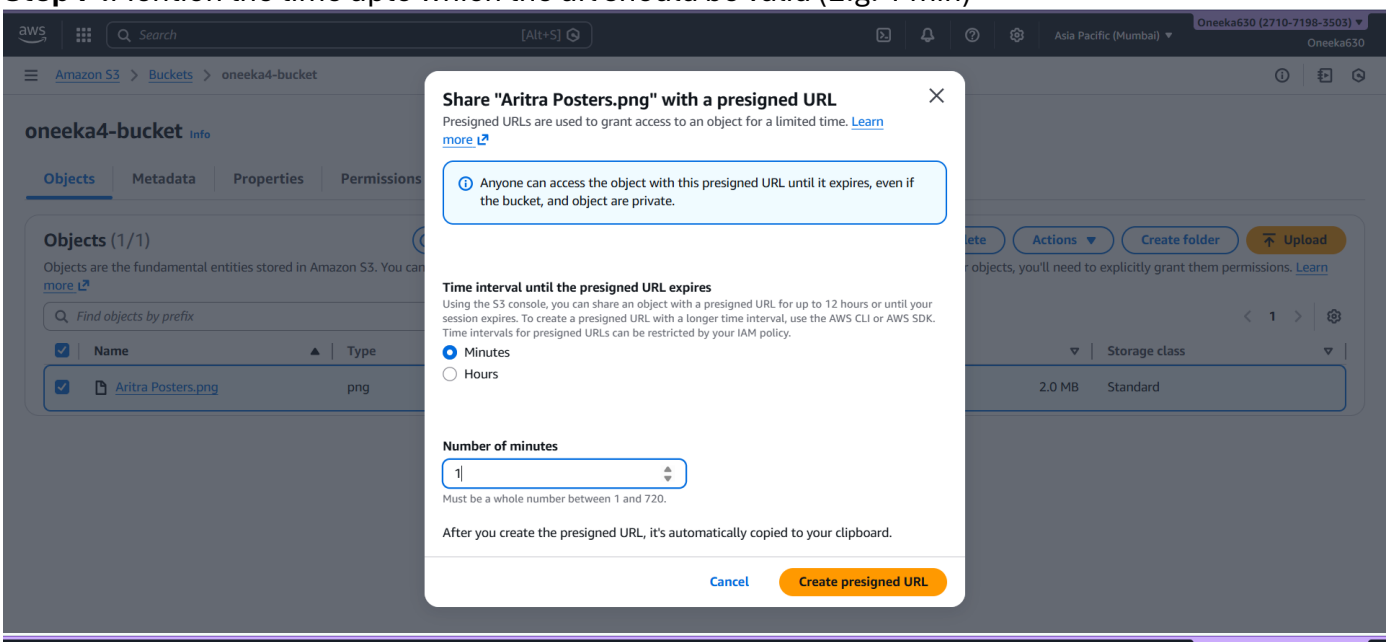


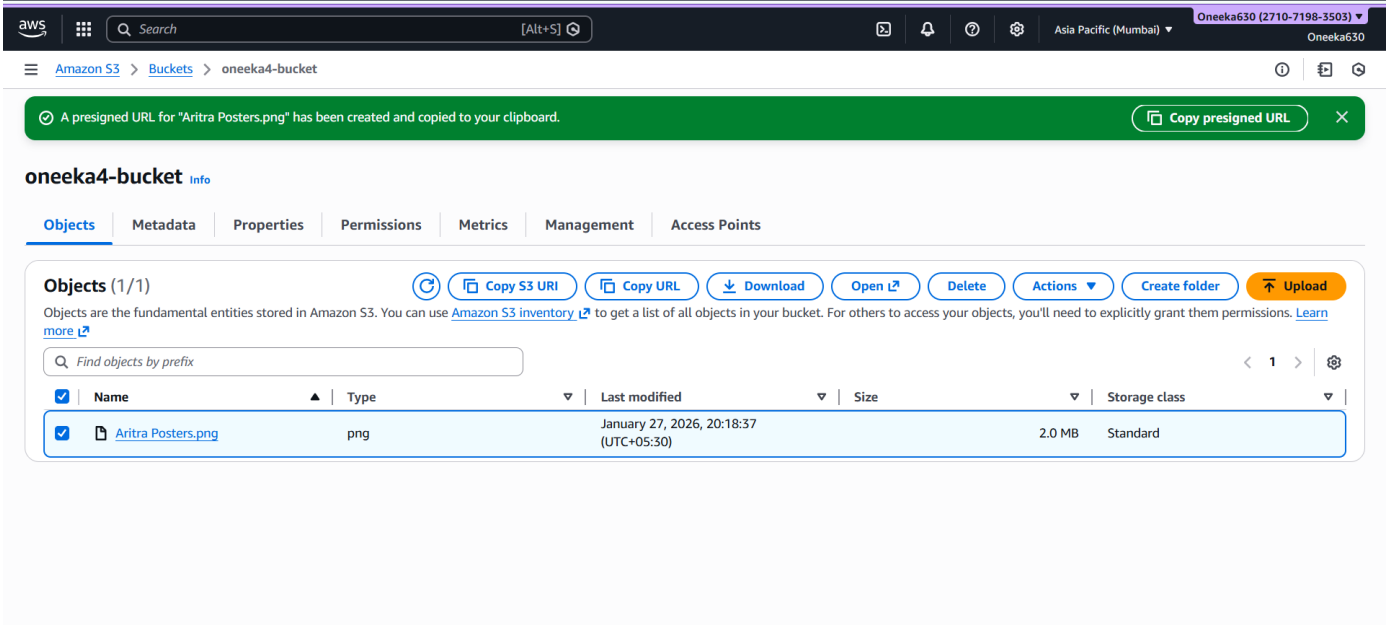


Step 6 : Select the file ->click on actions -> click on Share with a preassigned URL

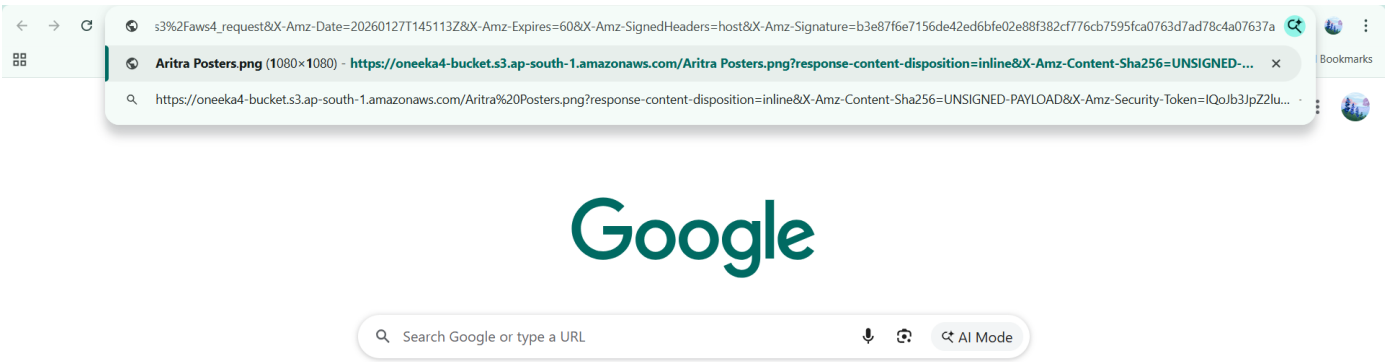


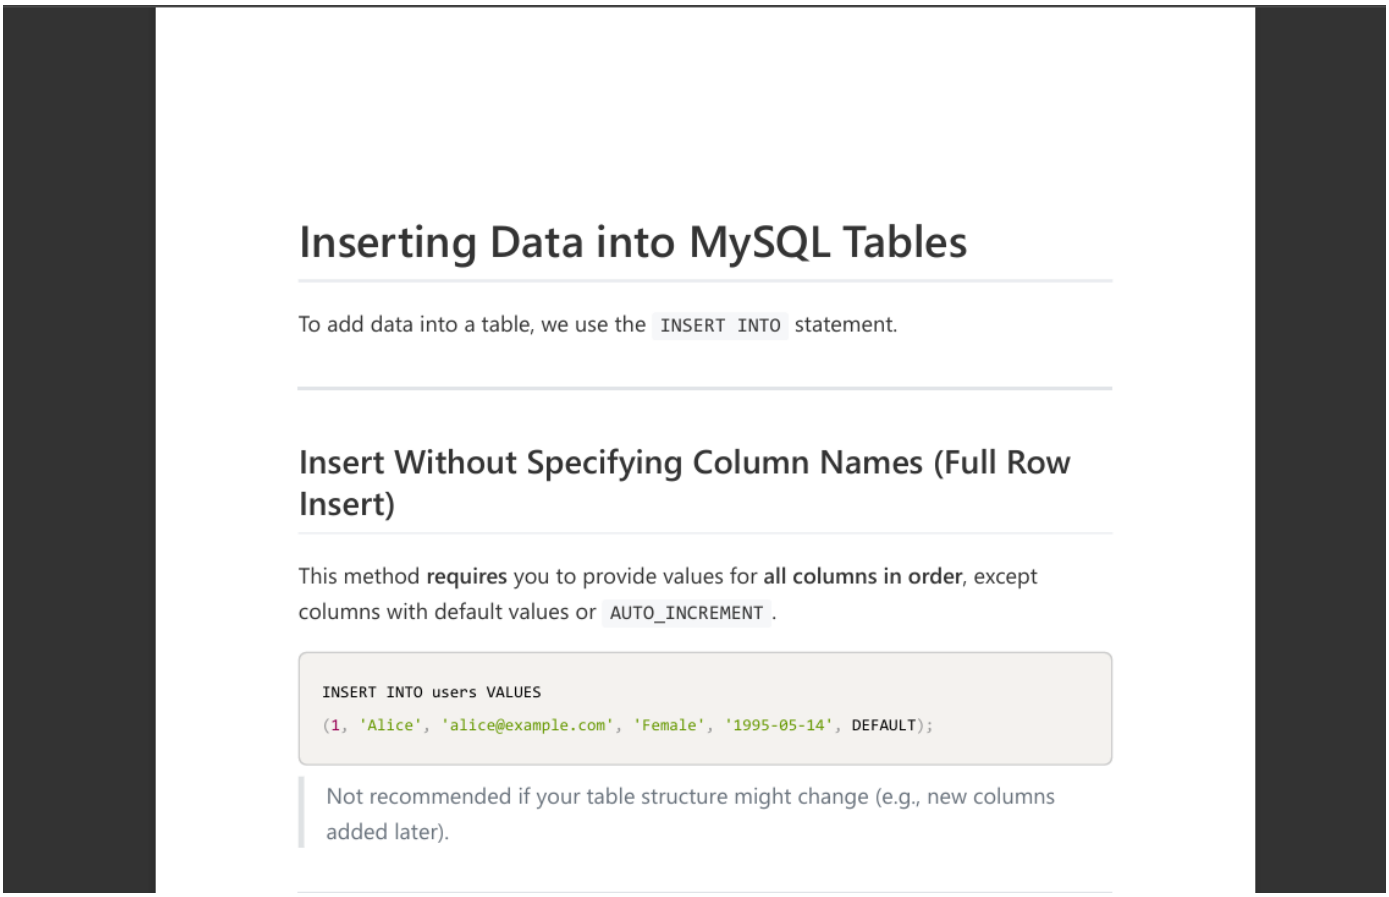
Step 7 : Mention the time upto which the url should be valid (E.g. 1 min)





Step 8: Check the URL





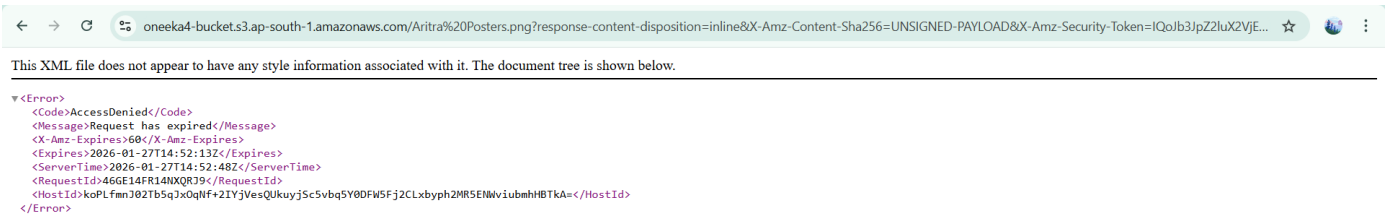
Inserting Data into MySQL Tables

To add data into a table, we use the `INSERT INTO` statement.

Insert Without Specifying Column Names (Full Row Insert)

This method **requires** you to provide values for **all columns in order**, except columns with default values or `AUTO_INCREMENT`.

```
INSERT INTO users VALUES
(1, 'Alice', 'alice@example.com', 'Female', '1995-05-14', DEFAULT);
```

> Not recommended if your table structure might change (e.g., new columns added later).


After 1 min -> access denied
