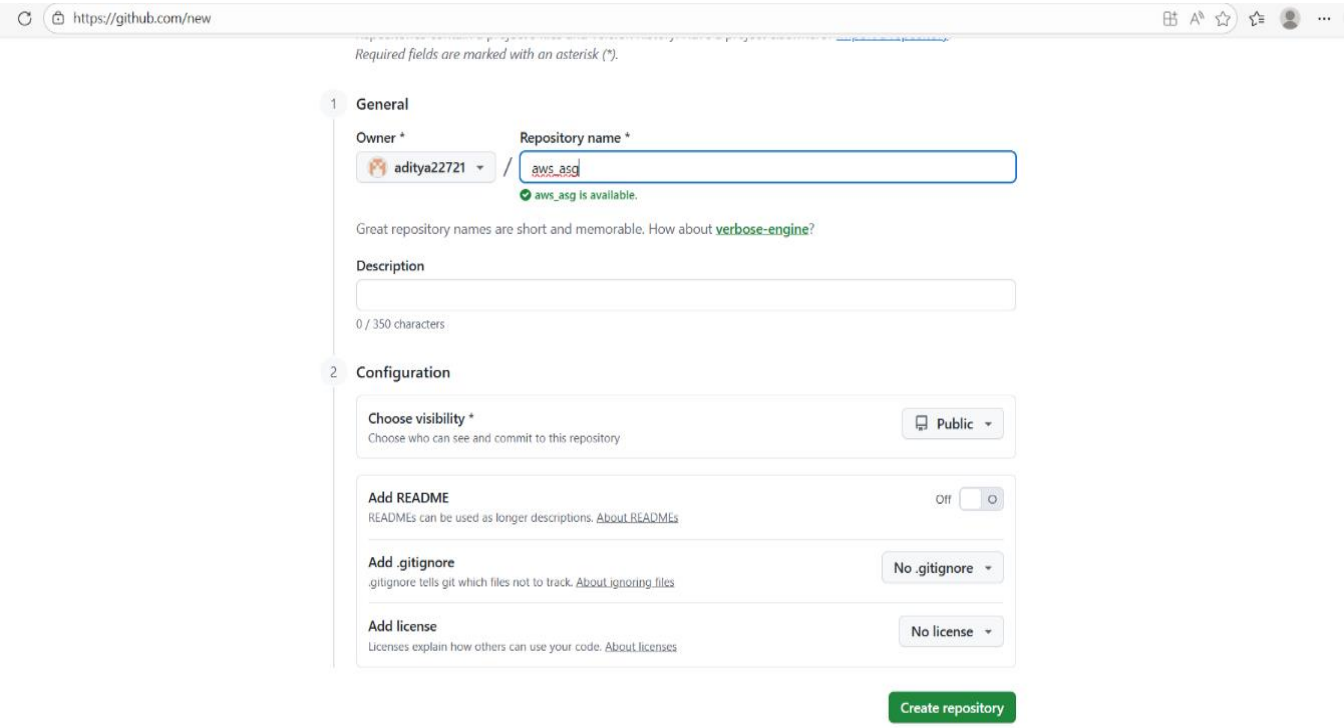
NAME :ADITYA CHAUBEY ROLL:137 EXAMROLL:11600223139

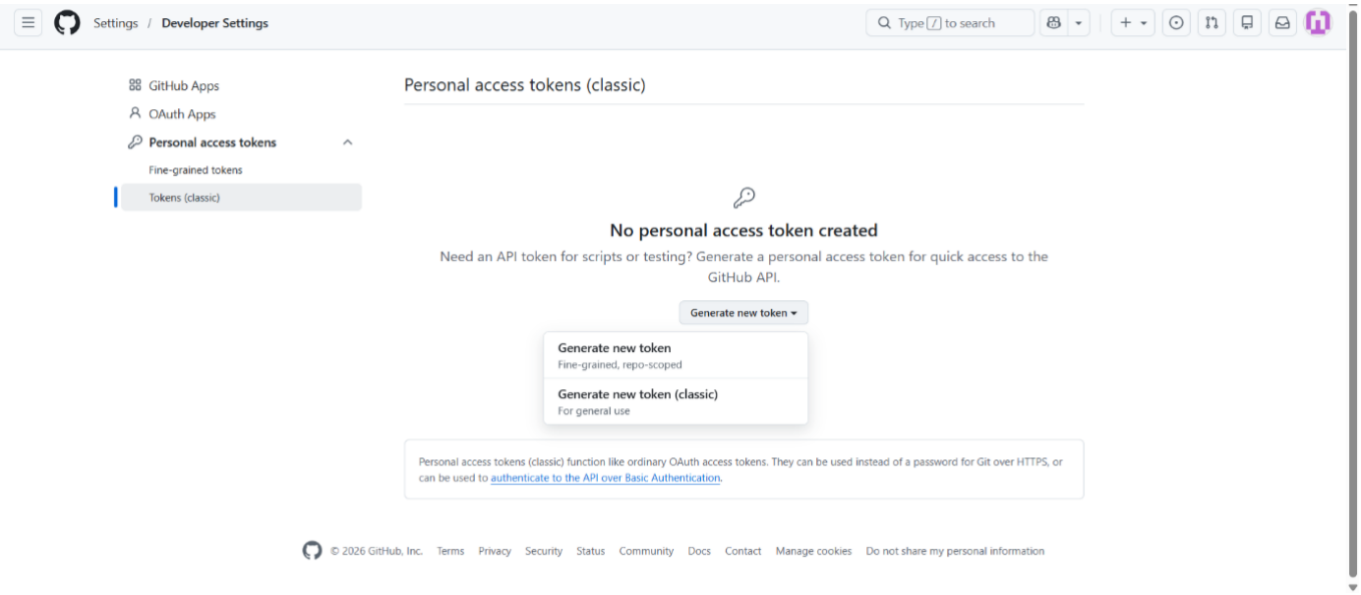
ASSIGNMENT:8

PROBLEM STATEMENT: Deploy a project from a local machine to GitHub and vice_versa.

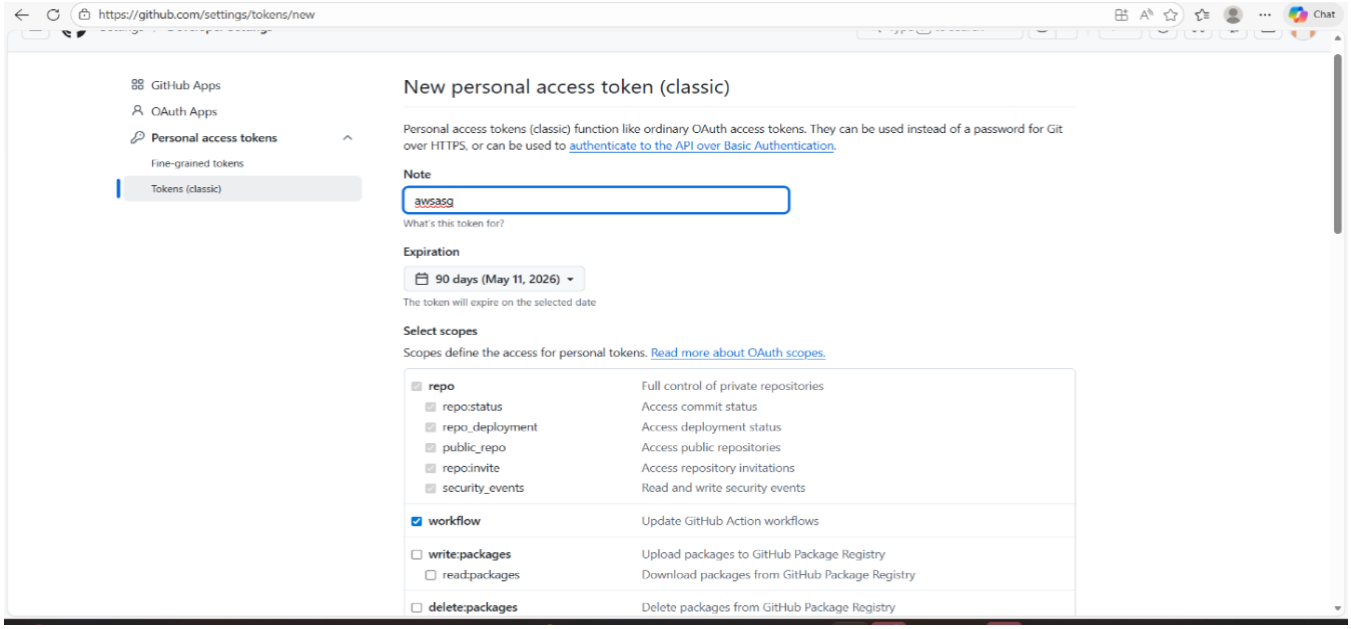
Step1: Create a new repository on Github. Repository name **aws_asg** and give a description then **click on create repository**



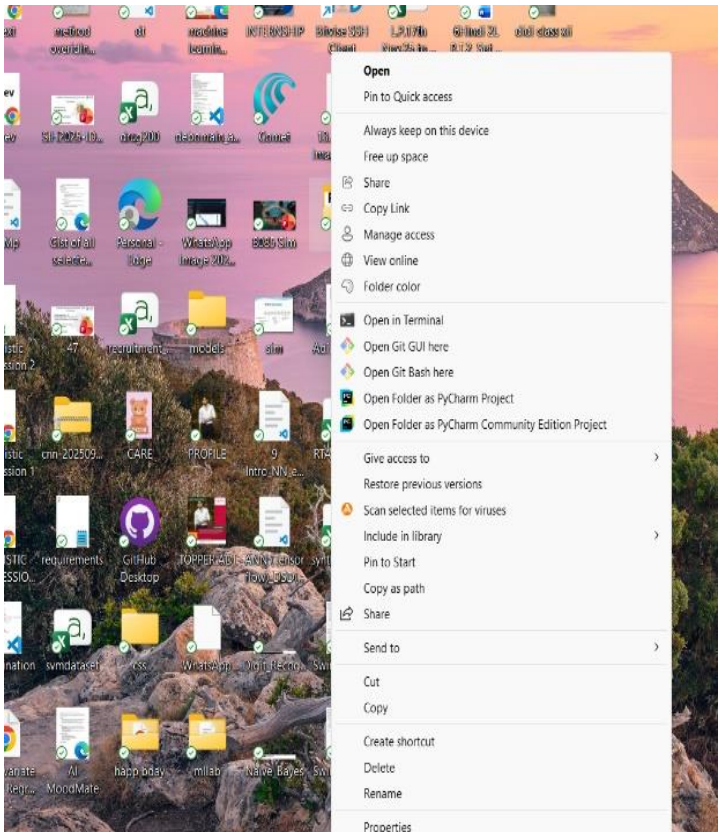
Step2: From settings go to personal access tokens and click on generate new token (classic).



Step3: Give the name to the token (awsasg) and make expiration 90days. And click on the checkbox of workflow and adminhook.



Step4: Right click on the folder name adi which we want to upload on GitHub and then select the option open GitBash here.



Step5: In GitBash write the commands to upload a file from local machine to GitHub. Using my GitHub username aditya22721 with the email id and also copy the link of my repository aws_asg.

```
MINGW64:/c/Users/adity/OneDrive/Desktop/adi

adity@LAPTOP-AKGTRFQ0 MINGW64 ~/OneDrive/Desktop/adi
$ git init
Initialized empty Git repository in C:/Users/adity/OneDrive/Desktop/adi/.git/
